Most people on English4IT.com are either studying for their first job in IT, or else trying to improve their current IT career. If this is the case with you, well then this unit should really help. Sometimes the hardest part of meeting a goal is to properly define what you are trying to accomplish in the first place. In this article we we will discuss the top IT job positions available around the world right now. So read the rest of the article, reflect on which career most suits your personality... and then go for it!

There are several things to keep in mind when determining what field of IT to go into. Keep an eye on job web sites such as DICE.com or Monster.com to see which jobs are most in-demand. Keep in mind that for many jobs described below, there are several levels of positions available. For instance there are "junior", "senior", and "lead" software developer positions available. You probably can't start out you career as a lead developer. You have to know your own limits.
