

Unit 9 — Programming Languages

2025 English for Information Technology. All rights

reserved.

.NET Framework

a software framework by Microsoft which executes code via a virtual machine

"The .NET Framework is Microsoft's premium solution for programming applications, and supports over 20 languages including C#, VB.NET, and IronRuby."

Bash

a command language written by Brian Fox in 1989 and used to administer linux and other Unix-like systems

"Bash is an acronym for "Bourne-again shell", a joke based on the name of the Bourne shell that it replaces and on the Christian religious term "born again"."

C programming language

a low-level, compiled programming language developed in the early 1970s by Dennis Ritchie for use on the UNIX operating system

"C is still a popular programming language 40 years after it was created, mainly due to its minimalism and extreme speed."
